

Chapter 1: System Configuration and Operational Environment.

SentinelForge requires standard POSIX environment parameters.

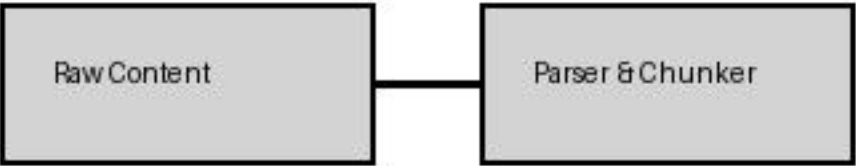

All file operations must reside strictly within the configured jail root directory.

Environment variables are loaded securely from the sanitized local configuration file.

Arbitrary system execution is prevented by strict path validation and isolation policies.

SCANNED APPENDIX: Verification logs from offline air-gapped run.

Recorded digest 7f83b1657ff1fc53b92dc18148a1d65dfc2d4b1fa3d677284add200126d9069

A diagram within a large black rectangular frame. It contains two smaller rectangular boxes. The left box is yellow and contains the text 'L1 Cache' and 'In-Memory BM25'. The right box is light blue and contains the text 'L2 Cache' and 'ChromaDB Store'.

L1 Cache
In-Memory BM25
